

Executive Summary

M&O Construction

What is the Opportunity?

- M&O Construction is a construction management company that works with the Tustin Unified School District to maintain and update school sites.
- M&O Construction lacks effective communication with the community, including teachers, students, and citizens, while working on construction projects at a school site.
- The solution to take advantage of this opportunity is that M&O Construction can utilize a communication tool to ensure the community is aware of the ongoing progress during a construction project.

Why is it Valuable to the Business?

- There will be better trust between M&O Construction and the community as information is updated to them through a communication tool, which can prevent disputes with the community regarding projects.
- According to Wijntjes, a construction communication app can improve trust with the community by providing real-time updates on construction. (Wijntjes, 2023)
- Utilizing a communication app can develop trust with the stakeholders, such as the school district, teachers, students, and parents. This prevents disputes due to external shocks in a project. (Rida, 2025)

Solution

M&O Construction can utilize a communication tool, such as email. Emailing the teachers, staff, parents, and students who are attending the specific school site where construction is happening. The email can include a link to a weekly newsletter called smore.com. This weekly newsletter can include updates with images to showcase the construction happening in real-time. It can also provide a timeline, so that the community can expect when the project will be completed.

How Could It Be Implemented?

- The contract specialists of M&O can be responsible for setting up and updating the communication tool.
- Once the tool is finally working, they can start using it to update the community of a school when construction occurs.

Timeline

It will take about 1-2 months to design and customize this communication tool to the company's standards. Gmail and Smore.com can be used to create this communication tool.
